SentiSum

Subtheme Sentiment Analysis Task

Subtheme Sentiment Analysis

Take the following example:

> *"One tyre went missing, so there was a delay to get the two tyres fitted. The garage a dealt with were fantastic."*

In this review there are numerous insights, insights we call *"subtheme sentiments"*. A Subtheme sentiment is generally a sentiment towards an aspect or a problem.
If we look at the subtheme sentiments of the above review we will get a clearer sense what these generally are.

incorrect tyres sent negative   **garage service positive**   **wait time negative**

The main difference between these subthemes is that **Garage Service** and **Wait Time** are aspects of the service that can be positive or negative while **Incorrect Tyres Sent** donotes a problem, something inherently negative.

Task

The task is to develop an approach that given a sample will identify the subthemes along with their respective sentiments.

Task Evaluation
This task will be evaluation by the following metrics:
- Approach
- Result

- Code
-

What should be submitted
- All code and resources (if these are large a link is sufficient)
- A summary, explanation and motivation of approach, along with ideas of improvements and possible problems with chosen approach.

Finally, Some Hints!
- Keep it simple but innovative and contemporary!
- A good motivation and explanation of your approach along with a good understanding of its shortcomings and ideas of improvements is as important, if not more important than the execution!
- Readable code and good documentation is appreciated!
- Keep an environment for easy set-up!
- Ask us questions if you are stuck or are having problems!
